Project Team:

Tommy Evans, P.E.
Jake Unruh
Andrew Moss, P.S.
Bill Fox, P.S.

This street improvement project replaces N. Kansas Avenue from south of and including the intersection of Morse Street just south of Soldier Street. Particular design items include evaluating the current storm sewer capacity in the project area, bringing all signals and sidewalk ramps into ADA compliance, determine areas for new sidewalk, evaluate the current street width to accommodate three lanes with reduced width on-street parking, provide recommended pavement section designs for the project, reconstruct the main roadway with asphalt pavement, rebuild the signalized intersections at Morse Street and Paramore Street with concrete pavement, salvage any brick found in the existing roadway, and removing the two large trees pushing up the east curb located north of Paramore Street. This project is part of a citywide half-cent sales tax program for improvements to be constructed in 2019.
