

**EAST CHESTNUT AVENUE OVER SKELETON CREEK
42ND AVENUE OVER BOGGY CREEK
CITY OF ENID
ENID, OKLAHOMA**

CONSTRUCTION COST: FORTHCOMING

COMPLETION: EAST CHESTNUT 2012; 42ND AVENUE IN PROGRESS

The City of Enid recently selected Poe & Associates for two load-posted bridge replacement projects. The first project included a new three-span bridge on East Chestnut Avenue over Skeleton Creek, and a second project will encompass a new three-span bridge on 42nd Avenue over Boggy Creek. Poe's services for both projects include design survey, hydraulic study and report, geotechnical investigations, utility coordination, right-of-way plans and acquisition, plans and specifications for the new bridges and approach roadways, and bid and construction phase services. These projects will be similar to four recently completed projects for the City of Enid that replaced load-posted bridges, funded by the City with a General Obligation Bond Program.

The design will be a team effort between the Oklahoma City and Tulsa offices, with Oklahoma City managing the project and doing the bridge design, and Tulsa doing the roadway design.

Project Team: Tim Purkeypile, P.E., C.F.M. (Bridge Engineer)
Bill Weatherford, P.E. (Roadway Engineer)
