

**AQUIFER STORAGE AND RECOVERY PROJECT  
CITY OF WICHITA  
WICHITA, KANSAS**

The City of Wichita's Aquifer Storage and Recovery Phase 2 projects utilized several engineering firms as part of a team effort; Poe & Associates' Wichita office was included in that team. Poe's design services included assistance with the Preliminary and Final Design of the raw water pipeline, including routing of the pipeline, easement requirements, ownerships, assistance with the primary design report, and final design of the plan and profile sheets. Poe's survey crew did the topographic survey for the river intake structure and construction survey for the treatment plant. Poe assisted with the construction phase services by providing an on-site representative during construction of the raw water pipeline.

**Project Team:** James Ubert, P.E. (Principal-in-Charge)  
Jim Parsons (Project Design and On-Site Representation)
